EDUCATION

University of California, Irvine

BS Computer Science.

De Anza College

AS-T Computer Science. GPA: 3.75.

Relevant Coursework: Data Structures, Algorithm Design, Object-Oriented Programming, Systems Design

Irvine, CA

Expected Jun 2028

Cupertino, CA

Jun 2026

EXPERIENCE

Software Engineering Intern

Mar 2026 – Aug 2026

Unimode AI

- Built and deployed a production semantic search platform serving 1.3M+ indexed products across multi-tenant merchant catalogs on Google Cloud, using Vertex AI Vector Search, Redis caching, and PostgreSQL.
- Improved maintainability across production services by designing a shared Python pipeline with a plugin architecture, enabling embedding, indexing, and storage backends to be swapped via configuration.
- Led a team of 6 in a multistep agentic search simulation to enrich e-commerce catalog data, observing AI mention and citation rates across product listings.

AI/ML Engineer Extern (Pfizer Project)

Jan 2026 – Mar 2026

Extern

- Automated structured data extraction from pharmaceutical documents by developing an OCR and LLM-powered NLP pipeline using PaddleOCR, Tesseract, and frontier models.
- Built a multi-agent semantic search and classification pipeline with LlamaIndex for retrieval over regulatory documents.
- Built a regression test harness spanning 20+ scenarios across 500+ pharmaceutical documents, tracking retrieval confidence and answer correctness to detect pipeline drift.

STEM Teacher

Jun 2024 – Mar 2026

Young Gates

- Delivered 20+ workshops in programming, game development, and 3D design to classes of approximately 30 students.

PROJECTS

PlanPal

CodePath

- Built an AI-assisted scheduler converting natural-language requests into structured tasks using a multi-agent Gemini pipeline, improving parsing and validation across ambiguous inputs.
- Improved task parsing accuracy from 88.3% to 96.7% by designing a three-stage evaluation framework comparing baseline, few-shot, adversarial, and context-sensitive prompting strategies.

Study Guild

Personal

- Built a multi-agent RAG study platform generating in-scope study guides and adaptive quizzes from course materials, grounding responses in retrieved context.
- Designed a retrieval-oriented database to improve quiz generation quality and subject-specific response accuracy.

Scantry

Personal

- Built a Raspberry Pi-powered inventory platform with barcode scanning and Grocy for grocery, expiration, and pantry tracking.
- Developed an MCP server exposing real-time inventory, grocery lists, and household tasks for LLM agent integration.

ACTIVITIES & LEADERSHIP

De Anza Game Development Club

Jan 2025 – Jan 2026

Club President

- Grew the club from 5 founding members to 200+ online. Directed two annual game jams, growing from 145 participants and 37 submissions (Spring 2025) to 300 participants, 69 submissions, and 4 industry sponsors (Aseprite, Clip Studio Paint, FL Studio, GameMaker Studio) in February 2026.

SKILLS

Languages: Python, C++, JavaScript, TypeScript, C#, HTML/CSS

Frameworks & Tools: React, Node.js, Flask, FastAPI, REST APIs, Git, Agile/Scrum

Cloud & Infrastructure: Google Cloud Platform, AWS, Docker, CI/CD

Data & Retrieval: PostgreSQL, SQLite, RAG, Redis

Spoken Languages: English (Fluent), Filipino (Fluent), Spanish (Basic)
