EDUCATION

University of California, Irvine

BS Computer Science | Expected Jun 2028

Irvine, CA

Sep 2026 - Present

De Anza College

AS-T Computer Science | GPA 3.75

Cupertino, CA

Jan 2023 - Jun 2026

EXPERIENCE

Software Engineering Intern | Unimode AI

Mar 2026 – Present

- **Deployed a production backend platform serving 1.3M+ indexed products** on Google Cloud using Vertex AI Vector Search, Redis caching, and PostgreSQL persistence; **reduced query p95 latency by 71%** by migrating service communication from public endpoints to private VPC networking.
- **Built an automated data ingestion pipeline** processing client catalog data (~9k products average) and provisioning tailored outputs, reducing provisioning time from **~3 days to under 4 hours**.
- Improved maintainability across production services by designing a shared **Python pipeline with a plugin architecture** that enabled embedding, indexing, and storage backends to be swapped through configuration.

Open Source Contributor | DCS Simulation Engine (Georgia Tech)

Jun 2026

- **Built the project's first frontend test suite** (Vitest, React Testing Library, jsdom) for a React UI with zero prior coverage
- **Designed a controllable mock WebSocket** that injects server frames, enabling 7 behavioral tests of the session state machine (auth, replay, error handling) with no live server
- Added a CI gate via GitHub Actions and a Makefile target; upstream **PR merged (10 files, +648 lines)**

AI/ML Engineer Extern (Pfizer Project) | Extern

Jan – Mar 2026

- **Built a regression test harness spanning 20+ scenarios across 500+ documents**, tracking retrieval confidence and answer correctness to detect pipeline drift.
- **Automated structured data extraction from pharmaceutical documents** using an OCR and LLM-powered NLP pipeline built with PaddleOCR, Tesseract, and frontier models.
- Built a **multi-agent semantic search and classification pipeline** with LlamaIndex for retrieval over unstructured regulatory documents.

PROJECTS

Study Guild

Personal

- Built a **multi-agent RAG platform** generating study guides and adaptive quizzes from course materials, grounded in context.

PlanPal

CodePath

- Built an AI-assisted scheduler converting natural-language requests into structured tasks using a **multi-agent Gemini pipeline**, improving parsing and validation across ambiguous inputs.
- **Improved task parsing accuracy from 88.3% to 96.7%** by designing a **three-stage evaluation framework** comparing baseline, few-shot, adversarial, and context-sensitive prompting strategies.

LEADERSHIP & ACTIVITIES

STEM Instructor | Young Gates

Jun 2024 – Mar 2026

- Delivered **20+ workshops in programming, game development, and 3D design** to classes of ~30 students, designing curricula end-to-end.

Club President | De Anza Game Development Club

Jan 2025 – Jan 2026

- Grew the club **from 5 founding members to an online community of 200+**. Directed **two annual game jams**, growing participation from 145 participants / 37 submissions to **300 participants / 69 submissions** and securing **4 industry sponsors**.

SKILLS & INTERESTS

Languages: C++, C#, Python, JavaScript, TypeScript, HTML/CSS

Frameworks & Tools: FastAPI, Flask, React, Node.js, LlamaIndex, Vitest, Docker, Git, Github, Unity

Cloud & Data: PostgreSQL, SQLite, Redis, Google Cloud Platform, AWS

Interests: Martial Arts, Dungeons & Dragons, Musical Instruments, Game Development
